Video/Speaker Observation Form

Video Title/Speaker: The Veterans, JPL form

Subject summary: We had to design an device too shoot a ball, through a target, and bounce to take out a flame. We need The device to be very accurate, have a certain weight (JPL wouldn't allow something to heavy), and on top of that, we have too also shoot a 8in ball without it hitting anything, it only Bouncing on certain places. The veterans want to develop a certain Type of turret to fire at a certain angle, and VERY compact. It has to have a certain size.

Coollest thing you learned : WE GET TO DEVELOP A CANNON!

What you disliked: The project will have to be accurate, Compact, and safe. I also don't like how we have to have a small team.
