

## Video/Speaker Observation Form

Video Title/Speaker: Mr. Wilton

Subject summary: Mr. Wilton talked about a camera he was developing For a hospital. It would video record surgeries, and it could a 360 degree view of sight. It would revolutionize how that hospital would video record Its surgeries. Unfortunately, it was still in development, so we couldn't see it for real. Regardless, I still enjoyed listening of how he came of with his idea.

When done talking, Mr.Wilton talked about his life. He worked for several movie business's, like DreamWorks and Disney. He also added that be helped design the camera's used in STAR TREK. He had an interesting life. But despite everything he has done, it was surprising to know that he didn't have A High School Diploma. It makes me inspired to know that no matter what happened to him, he made sure he got what he wanted later on in life.

Coollest thing you learned: He created his own racecar during 17!!  
He also competed with it in races.
